Success Story

DAMU : KVK, Amravati -II (Maharashtra)

Farmer Name : Nikhil Madhukar Tetu

Contact Number : 9529600161

Village : Kurha Ta- Tiwsa

Block : Tiwsa Dist Amravati dated 20/10/2021

I have cultivating cotton and soybean of *rabbi* crop from last 7-8 years. In this year 2020-2021 I have sown cotton and soybean crop on 2.5 hectare area. 5th October, at the time of before harvesting, I have receive the agromet advisory bulletin on 2.30 pm on block of Tiwsa whats app group created by DAMU, Amravati KVK, and also receive the warning of light to medium rainfall for next five days. Immediately we start the harvesting of soybean after harvesting we collected harvested crop and threshing yard and cover with (Tadpatri) plastic sheet at evening time. and receive the agromet advisory bulletin on 12 october also warning of medium rainfall onwards after 15 October to 21 October. Immediately we start the boll picking of cotton crop. Due to DAMU bulletin and timely weather alert received on whatsapp group to save my cotton and soybean crop from of medium rainfall for after 15 October, also I have save the lost of cotton and soybean crop which worth about 40000 and 50000 rupees. previously I used internet for different weather app, to get weather forecast but am not satisfied with that weather information but from this year I have got regular weather forecast information and agro advisory bulletin from DAMU, KVK, Amravati on every Tuesday and Friday, in addition to bulletin we also get weather warning on other days. In this year I have carried out farm operations by considering and followed the weather forecast. Now I use agromet advisory bulletin for management of my fruit crop (Orange), along with vegetable as per the bulletin we undertake crop management practices such as spraying, irrigation, fertilizer application, also fruit dropping of orange etc. So I am very satisfied with this agromet advisory bulletins.
